Indiana Vegetable Planting Calendar

Michael N. Dana and Allen E. Boger*

Planting vegetable seeds or transplants at the correct time is an important step toward a successful garden. The correct timing is determined by the soil temperature required for seed germination and the temperature tolerance of the plants. The best date for planting can vary from season to season. It also differs from one location to another based on the microclimatic effects of urban areas, natural terrain, moisture, sunlight, wind exposure, and garden devices such as cloches and mulches.

Because of this variation, we can only suggest a range of safe planting dates based on the average dates of the last normal freeze in the spring (Figure 1) and the first freeze in the fall (Figure 2). You should note the current weather conditions and projections as well as site conditions in determining the correct planting date for a specific crop and variety. To increase the likelihood of success, it is suggested that you plan to make several plantings within this range of dates. This will also extend the harvest season over a longer period of time. When only one planting is planned, make it about midway through the range. Table 1 indicates spring planting

dates, while Table 2 suggests appropriate dates for fall garden planting.

Soil Temperature

Many summer vegetable crops do not grow well until the soil temperatures are warm. In years when cool air temperatures and rainfall do not allow the soil to warm up, delay planting warm season crops such as beans, tomatoes, squash, sweet potatoes, and peanuts until the soil temperature is suitable for optimum germination and/or growth. Otherwise, seed and root rot disease and related disorders are likely to occur.

For more experienced gardeners, soil temperature measurements offer an alternative to planting according to frost dates. Soil can be warmed early by the use of black or clear plastic mulches. Seeds which require warm temperatures for germination can then be planted successfully before the recommended dates. However, protection against late frosts for the seedlings may be required. Table 3 provides seed germination temperatures for several vegetables.

Figure 1. Average frost free dates in the spring.

After the average frost free date, a temperature of 32°F/0°C is likely to occur 50% of the time, or 1 out of 2 years. About 2 weeks later in the spring, the chance of 32°F/0°C decreases to 10%, or 1 in 10. Thus, tender plants set out on the average frost free date will need some protection against cold 1 out of 2 years, while delayed plantings will almost never require additional protection.

Figure 2. Average first frost dates in fall.

The chance of a frost on the average first frost date is 50%, or 1 out of 2. However, the likelihood of a 32°F/0°C occurrence is only 10% (1 in 10) 2 weeks prior to the average first frost date. Thus, late plantings of tender crops should be timed to mature appropriately, with the attendant risk of loss taken into consideration.

Table 1. Earliest dates and ranges of dates for spring planting of selected vegetables in the garden (Regions of Indiana located in Figure 1).

Crop	Area A	Area B	Area C	Area D
Asparagus (1)	Mar 10-Apr 10	Mar 15-Apr 15	Mar 20-Apr 15	Mar 10-Apr 30
Bean, Lima	Apr 1-June 30	May 1-June 20	May 15-June 15	May 25-June 15
Bean, Snap	Apr 10-June 30	Apr 25-June 30	May 10-June 30	May 10-June 30
Beet	Mar 10-June 1	Mar 20-June 1	Apr 1-June 15	Apr 15-June 15
Broccoli, sprouting(1)	Mar 15-Apr 15	Mar 25-Apr 20	Apr 1-May 1	Apr 15-June 1
Brussels sprout (1)	Mar 15-Apr 15	Mar 25-Apr 20	Apr 1-May 1	Apr 15-June 1
Cabbage (1)	Mar 1-Apr 1	Mar 10-Apr 1	Mar 15-Apr 10	Apr 1-May 15
Cabbage, Chinese	(2)	(2)	(2)	Apr 1-May 15
Carrot	Mar 10-Apr 20	Apr 1-May 15	Apr 10-June 1	Apr 20-June 15
Cauliflower	Mar 1-Mar 20	Mar 15-Apr 20	Mar 1-Mar 20	Mar 15-Apr 20
Celery and celeriac	Apr 1-Apr 20	Apr 10-May 1	Apr 15-May 1	Apr 20-June 15
Chard	Mar 15-June 15	Apr 1-June 15	Apr 15-June 15	Apr 20-June 15
Chervil and chives	Mar 1-Apr 1	Mar 10-Apr 10	Mar 20-Apr 20	Apr 1-May 1
Chicory, witloof	June 10-July 1	June 15-July 1	June 15-July 1	June 1-June 20
Collard (1)	Mar 1-June 1	Mar 10-June 1	Apr 1-June 1	Apr 15-June 1
Cornsalad	Feb 1-Apr 1	Feb 15-Apr 15	Mar 1-May 1	Apr 1-June 1
Corn, sweet	Apr 10-June 1	Apr 15-June 15	May 10-June 15	May 10-June 1
Cress, upland	Mar 10-Apr 15	Mar 20-May 1	Apr 10-May 10	Apr 20-May 20
Cucumber	Apr 20-June 1	May 1-June 15	May 15-June 15	May 20-June 15
Eggplant (1)	May 1-June 1	May 10-June 1	May 15-June 10	May 20-June 15
Endive	Mar 15-Apr 15	Mar 25-Apr 15	Apr 1-May 1	Apr 15-May 15
Fennel, Florence	Mar 15-Apr 15	Mar 25-Apr 15	Apr 1-May 1	Apr 15-May 15
Garlic	Feb 20-Mar 20	Mar 10-Apr 1	Mar 15-Apr 15	Apr 1-May 1
Horseradish (1)	Mar 10-Apr 10	Mar 20-Apr 20	Apr 1-Apr 30	Apr 15-May 15
Kale	Mar 10-Apr 1	Mar 20-Apr 10	Apr 1-Apr 20	Apr 10-May 1
Kohlrabi	Mar 10-Apr 10	Mar 20-May 1	Apr 1-May 10	Apr 10-May 15
Leek	Mar 1-Apr 1	Mar 15-Apr 15	Apr 1-May 1	Apr 15-May 15
Lettuce, head (1)	Mar 10-Apr 1	Mar 20-Apr 15	Apr 1-May 1	Apr 15-May 15
Lettuce, leaf	Mar 15-May 15	Mar 20-May 15	Apr 1-June 1	Apr 15-June 15
Muskmelon	Apr 20-June 1	May 1-June 15	May 15-June 15	June 1-June 15
Mustard	Mar 10-Apr 20	Mar 20-May 1	Apr 1-May 10	Apr 15-June 1
Okra	Apr 20-June 15	May 1-June 1	May 10-June 1	May 20-June 10
Onion (1)	Mar 1-Apr 1	Mar 15-Apr 10	Apr 1-May 1	Apr 10-May 1
Onion, seed	Mar 1-Apr 1	Mar 15-Apr 1	Mar 15-Apr 15	Apr 1-May 1
Onion, sets	Mar 1-Apr 1	Mar 10-Apr 1	Mar 10-Apr 10	Apr 10-May 1
